

Complete Summary

TITLE

Osteoarthritis: percentage of patients with a diagnosis of symptomatic osteoarthritis of the knee or hip with an initial and annual pain assessment.

Process

The validity of measures depends on how they are built. By examining the key building blocks of a measure, you can assess its validity for your purpose. For more information, visit the [Measure Validity](#) page.

SECONDARY MEASURE DOMAIN

Does not apply to this measure

Brief Abstract

DESCRIPTION

This measure is used to assess the percentage of patients with a diagnosis of symptomatic osteoarthritis of the knee or hip whose pain is assessed upon diagnosis or introduction into a new practice and is assessed annually thereafter.

RATIONALE

Information gained from the pain assessment should direct therapeutic decisions.

Assessment of pain is implicitly recommended by the American College of Rheumatology (ACR) in their guidelines for OA. The American Board of Family

Practice (ABFP) specifically recommends assessing pain during the evaluation of patients with arthritis.

PRIMARY CLINICAL COMPONENT

Osteoarthritis; pain assessment

DENOMINATOR DESCRIPTION

Patients with a diagnosis of symptomatic osteoarthritis of the knee or hip

NUMERATOR DESCRIPTION

Patients whose pain is assessed upon diagnosis or introduction into a new practice and is assessed annually thereafter

Evidence Supporting the Measure

EVIDENCE SUPPORTING THE CRITERION OF QUALITY

- A clinical practice guideline or other peer-reviewed synthesis of the clinical evidence
- A formal consensus procedure involving experts in relevant clinical, methodological, and organizational sciences

Evidence Supporting Need for the Measure

NEED FOR THE MEASURE

Characteristics of the Primary Clinical Component

INCIDENCE/PREVALENCE

Osteoarthritis (OA) is the most common form of arthritis. It is a degenerative joint disease that affects about 12% of the general population, with prevalence increasing with age. Between 60% and 70% of individuals aged 65 years or older show radiographic changes consistent with OA, and about half of these meet classification criteria for the disease by reporting joint pain or stiffness.

EVIDENCE FOR INCIDENCE/PREVALENCE

Hawker G. Epidemiology of arthritis and osteoporosis. 1st ed. Toronto (ON): Institute for Clinical Evaluative Sciences (ICES); 1998.

Lawrence RC, Helmick CG, Arnett FC, Deyo RA, Felson DT, Giannini EH, Heyse SP, Hirsch R, Hochberg MC, Hunder GG, Liang MH, Pillemer SR, Steen VD, Wolfe F. Estimates of the prevalence of arthritis and selected musculoskeletal disorders in the United States. *Arthritis Rheum* 1998 May;41(5):778-99. [PubMed](#)

ASSOCIATION WITH VULNERABLE POPULATIONS

See "Incidence/Prevalence" field.

BURDEN OF ILLNESS

Pain and disability are the most common consequences of osteoarthritis (OA) joint damage.

EVIDENCE FOR BURDEN OF ILLNESS

Felson DT, Lawrence RC, Dieppe PA, Hirsch R, Helmick CG, Jordan JM, Kington RS, Lane NE, Nevitt MC, Zhang Y, Sowers M, McAlindon T, Spector TD, Poole AR, Yanovski SZ, Ateshian G, Sharma L, Buckwalter JA, Brandt KD, Fries JF. EXTENT OF MEASURE TESTING

A multidisciplinary expert panel comprised of nationally recognized experts discussed and rated the validity of each of the proposed measures based on the evidence and their expert opinion using a modification of the RAND/UCLA Appropriateness Method.
